FREQUENTLY ASKED QUESTIONS

# One-click deploy pipeline

How product teams ship to production on their own, safely.

| AVAILABLE FROM | FOR | WHERE | SUPPORT |
|---|---|---|---|
| November 10 | All product teams | deploy.company.internal | #platform-help |

WHAT

## What is the one-click deploy pipeline?

A button in your repository that tests, approves and ships your change to production, with automatic rollback if something fails.

WHY

## Why are we changing how we deploy?

Today a release takes 2 days and needs the Platform team. With the pipeline, teams ship in under 30 minutes, on their own.

WHO

## Who can use it?

Any engineer in a product team. Production deploys need one approval from someone else on your team.

WHEN

## When can I start?

From November 10 for web services. Mobile apps join on ENTER_DATE.

WHERE

## Where do I find it?

In the Actions tab of your repository, and the deploy history at deploy.company.internal.

HOW

## How do I deploy for the first time?

Merge to main, open Actions and press Deploy. The first time, follow the 10-minute guide linked in the repo.

LIMITS

## Are there times I can't deploy?

Yes: no deploys on Fridays after 3 pm or during announced freeze periods, like Black Friday week.

HELP

## What if my deploy fails?

It rolls back on its own. If it doesn't, post in #platform-help with the link to the failed run.

### You can

- ✓ Deploy web services to production on your own.
- ✓ Roll back to the previous version in one click.
- ✓ See who deployed what and when.

### You can't / limits

- ✗ Deploy without one approval from your team.
- ✗ Deploy on Fridays after 3 pm or during freezes.
- ✗ Change production databases from the pipeline.

NEED HELP?

**Contact:** Platform team (ENTER_OWNER)
**Hours:** Mon–Fri, 9 am to 6 pm
**If it's urgent:** Page the on-call engineer: ENTER_PAGER_LINK

**Channel:** Slack #platform-help
**Response time:** Under 2 business hours
